

# TRIAC ST Professional Heat Gun

The TRIAC ST is a professional heat gun, primarily used as a profiling tool for welding and processing plastic membranes. Additionally, it is used for professional welding, shrinking, and molding various thermoplastics. The two-sided air filters can be easily removed and cleaned, ensuring an optimal air supply and maximum performance.

Compared to the design of other heat guns, the proven bar-style heat gun enables welding above the head, on the floor and in narrow areas. The ergonomic, two-component handle and its optimized center of gravity provide an ideal grip, even for longer periods of use and under difficult conditions. When in use, the actively cooled, protective tube ensures continuous safety by protecting against burns. The carbon brake also protects the heat gun from overloading.

- Professional heat gun with countless applications
- 120V, 1600W, 104.0-1292.0°F Temperature Range
- Ergonomic, two-component handle
- Developed for difficult worksite conditions
- Reliable and robust hot air blower with temperature control
